Datasheet

Carrot communication interface MX

- Communication with Carrot ECU and laptop/PC
- Micro USB
- CAN-bus communication
- Enables datalogging functionality

The Carrot communication interface is the required device for the communication between a Carrot MX ECU and your laptop or PC. The interface needs to be connected to the diagnostic connector of the ECU, and a USB-port of your laptop or PC. Together with the Carrot engine management software, you can control all settings and parameters. The communication interface is functioning simultaneous as a datalogging device, in combination with the datalogging software.

Technical Specifications

Plastic housing
1x Micro USB connection
1x Diagnostic connector (model dependent)
Micro USB to USB type A cable included
Size 33mm x 29mm x 13mm (LxWxH)
1x CAN communication bus (1MHz)

Included in the box

Carrot communication interface
USB-memory stick with software/mappings/manuals
Datalog software license
Quick-start manual
