Datasheet

Carrot communication interface

- Communication with Carrot ECU and laptop/PC
- Micro USB
- CAN-bus communication

The Carrot communication interface is the required device for the communication between a Carrot ECU and your laptop or PC. The interface needs to be connected to the CAN-bus of the ECU, and a USB-port of your laptop or PC. Together with the free downloadable Carrot engine management software, you can control all settings and parameters. The communication interface is functioning simultaneous with other devices connected to the CAN-bus network.

Technical Specifications

Plastic housing
1x Micro USB connection
1x 4 pin binder connector
Micro USB to USB type A cable included
Size 33mm x 29mm x 13mm (LxWxH)
1x CAN communication bus (1MHz)

Ordering information

Carrot communication interface - C-020-0002 - €125,-
